

USING
SPACE HEATERS TO
HEAT YOUR HOME
CAN RESULT IN

HIGHER
ELECTRIC
BILLS!

IN FACT, use of one small (1500 watt) space heater in your home could add more than **\$100** to your monthly electric bill.

Space heaters only warm a small space, in contrast to your central heating system which warms your entire home.

Here are some other money-saving energy conservation tips that can help reduce your electric bill:

- ✓ **Keep your thermostat at the lowest comfortable setting**
- ✓ **Insulate windows and caulk around doors and windows**
- ✓ **Check your home's insulation and add more if necessary**
- ✓ **Set your water heater to 120 degrees**
- ✓ **Clean and replace your air filters regularly**
